OVERVIEW

With over three years of experience, I have developed my expertise in technology and personal growth, becoming a proficient software engineer with a strong work ethic, exceptional logical thinking abilities and the interpersonal skills to both learn from and teach my peers.

WORK EXPERIENCE

SOFTWARE DEVELOPER, NRI-DISTRIBUTION

JAN/2022 – MAY/2024

VANCOUVER, BRITISH COLUMBIA

Stack: TypeScript (React), Vb.Net, C#, Postman, Microsoft SQL Server, Git, Jira, Azure.

- Using TypeScript, developed the web application that would be used to track, handle, and display company inventory data.
- With VB and C#, created new business logic, fixed bugs, optimised object classes, created new REST API endpoints, cleaned code, and wrote unit tests.
- Testing with Postman, validated the functionality of new endpoints developed.
- For database queries, I altered procedures, wrote queries to be executed in the codebase, made hot bugfixes to the production server.
- Utilizing TeamCity as the CI/CD tool. Developed new projects pipelines to run for the new front-end focused repositories. GitHub was used as the VCS, with GitKraken.
- With Azure, I explored its data tracking services via its telemetry capabilities and how it could be implemented into the codebase.
- Using Jira, Confluence, and other Atlassian applications, I wrote documentation on the company and work flow processes. Created tickets, worked with Agile methodologies, scrum and kanban.

WEB DEVELOPER, STONEHANDS-MOVING

SEPT/2024 – NOV/2024

VANCOUVER, BRITISH COLUMBIA

Stack: React.js, Next.js, CSS3, Node.js, Express, Git, GoogleMapsAPI.

- Using React.js and Next.js, stonehandsmoving.com was designed and developed the website structure and business logic. Making the site faster and have better SEO ability.
- The website was styled with CSS3. Utilizing transitions, transforms and modern displays.
- Node.js was used to build the backend and handle logic.
- Backend was built with Node.js and Express.js was used to build the endpoints and make other outbound request calls to GoogleMapsAPI.

RELEVANT PROJECTS
